A car needs a full working transmission (or gearbox) in order to allow the vehicle to change gears, but the inner workings of a vehicle differs greatly between a manual transmission car and an automatic transmission car. A manual car is recognisable from the inside, as it contains a clutch pedal, which is used to change gears, as well as a gear shift stick between the two front seats, which offers full control of the car and between 5-6 gears and reverse.

Manual vs. Automatic Car Transmission: Which is Best?

Automatic transmissions require regular fluid changes and have a filter that needs to be replaced. That's because a traditional automatic transmission with a torque converter has slippage and relatively high fluid operating temperature with normal use. This degrades the fluid much more quickly than in a manual transmission.
