Pascal tended to rely on third-party modules that won't necessarily port. If the app was a console-based app then most of the code will convert almost directly. There are only a couple of language features in Pascal that won't directly convert (i.e. with statement and tagged records). But the rest of the code should convert pretty easily.

Pascal, C, PL/M and Ada were all contenders. Eventually, C won out (with Ada hanging on in defense-oriented applications), as it offered most benefits of a high level language, with very low overheads and the possibility to perform quite low level operations [like direct access to memory locations] without resort to assembly language.
